The need is great. The solutions are here. The time is now to end viral hepatitis.

EndHep2030’s catalytic funding will be the spark that sets this historic effort in motion. A number of barriers keep countries from properly addressing viral hepatitis. By funding highly effective activities to increase awareness of the problem and speed (or catalyze) prevention, diagnosis and treatment, EndHep2030 can help partners to overcome those barriers.

Our Goals:

Increase Awareness
Most people, including many policy makers, don’t understand the severity of this world-wide epidemic nor know that measures exist now to prevent and treat hepatitis.

Raise and Disperse Catalytic Funding
Prioritize efforts and programs that will accelerate progress toward the elimination of viral hepatitis as a public health threat:
- Developing sustainable strategic plans at the national and sub-national level to guide effective program implementation.
- Optimizing human and financial resources within health budgets so funds are effectively used.
- Increasing availability of country-specific data that inform where and how to intervene most efficiently and effectively.
- Building health system capacity to deliver quality hepatitis prevention and treatment services.

Bring an End to Hepatitis as a Global Health Threat by 2030
EndHep2030’s catalytic funding will be the impetus for this effort:
- Preventing childhood hepatitis B infections by improving vaccine delivery to newborns.
- Preventing new infections by promoting safer injection practices in healthcare settings and among people who inject drugs.
- Increasing the number of people diagnosed and linked to treatment through improved access to testing services.
Turning investment into **impact.**

01

EndHep2030 develops high impact signature initiatives by convening strategic partners, including governments and key implementers.

02

EndHep2030 engages prospective **investors** regarding signature initiative donation opportunities.

03

An **investor** joins a coalition of like-minded contributing **donors** to a signature initiative.

04

The **investment** is directed to signature initiative planning and implementation by national governments, local experts, and other partners.

05

Every **investment** can save lives and move the global community closer to eliminating viral hepatitis by 2030.
